Application/Control Number: 09/682,287

Art Unit: 2829

- 1. Applicant's election of Group I and the species to which claims 2-4 are drawn in Paper No. 4 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).
- 2. Claims 1 and 5-31 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention and/or species, there being no allowable generic or linking claim. Election was made without traverse in Paper No. 4.
- 3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

4. (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIA (pre-AIA 35 U.S.C. 102(e)).

5. Claims 2-4 are rejected under 35 U.S.C. 102(e) as being fully anticipated by Akram or Cook et al.

Application/Control Number: 09/682,287 Page 3

Art Unit: 2829

Note Figure 4 of Akram where an optical test signal is generated by LED 150 and passed through optical medium 190 to a photo detector 154. The output of the photo detector 154 is applied to IC 12. In Cook et al an optical signal generated by optical element 14 is applied to a photo detector 10 on a wafer and the output thereof is applied to devices on the wafer being tested.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Tuttle and White et al are cited to show apparatus similar to the applied references.
